

Project Title

Data cleaning&Transformation

Project Objective:

To clean the data and transform from the given data sets.

Dataset Description:

Dataset contains incorrect and misspelling values and letters.

Column Description:

Column in dataset contains inconsistent data and duplicates are there. And to find out the duplicates of the entire row. And to detect the splitting and merging data.

Therefore using the number formatting and conditional formatting also.

Column Name	Description
Ex: Product ID	Manufacturing Date with country code of the product
Product Name	Laptop,Sneakers,Coffee makers,etc
Brand Name	Dell,Nike,Keurig,etc.
Price	Price of the products
Quantity	Quantity of the products
Category	Category of the products

Data cleaning & transformation:

Questions No:1

1.Check for Missing Values in Price Column?

Using IF with ISBLANK Functions to check the missing values in the price column

Average of the total price column and to handle the missing values of the given price column.

```
IF(ISBLANK(D2),AVERAGE($D$2:$D$35),D2)
```

MISSING VALUE IS \$309.35

Question No:2

1.Identify the inconsistent text in product Name and Category column?

Using cleaning,Trimming and Proper functions are used to clean the inconsistent data from product name and category column

```
PROPER(TRIM(CLEAN(B2)))  
PROPER(TRIM(CLEAN(F2)))
```

2.Find out the misspellings in Product and Category columns?

No errors in Product column

Using Find and replace function to found out the errors in category
I Found that the unknown column and recorrect the spelling of electronics category

Questions No:3

3.Remove Duplicates in the entire row

Using Remove duplicates functions to clear the all duplicates in the entire data set

Questions No:4

4.Splitting and Merging Data

Using Left and Right Functions to split the Product ID converted to two columns

Manufacturing Date =Left(A2,6)
Country Code=Right(A2,2)

Merging Data

To Merge the Brand Name and Product Name
Concatenate(E2," ",D2)

Questions No:5

Number Formatting

1.To Format the price column in Currency Format

Go to home tab and select the Number Folder and to select the currency format

\$1000

2.To Format the Manufacturing date column in DD MM YY format

Go to home tab and select the Number Folder and to select the Date format
Year not given in the data set

28-Jan

Questions No:6

Conditional Formatting

1. Apply data bar or color scales in price column

Applying color scales to detect the highest, medium and lowest price in the given data set

Green, Yellow and Red colors

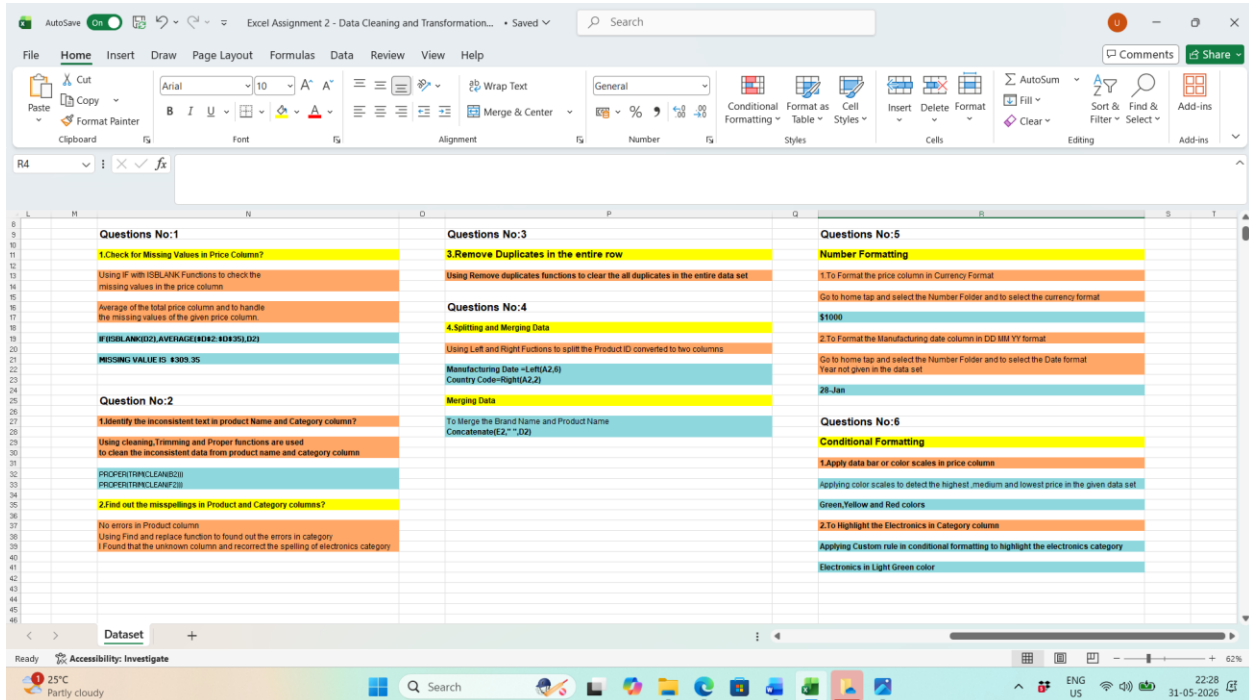

2. To Highlight the Electronics in Category column

Applying Custom rule in conditional formatting to highlight the electronics category

Electronics in Light Green color

Visualization and Insights Arrived with screenshot of visualization Report/Dashboard screenshot:

- Descriptive analysis:
 - To view the given data sets and to identify the errors.
- Diagnostic Analysis:
 - To identify the errors of the given data sets and using multiple functions.
 - To identify the duplicate rows of entire data sets.
 - Average, IF, ISBLANK, LEFT, RIGHT Functions, Number Formatting, conditional formatting
- Predictive Analysis:
 - Using functions to clean the data and transformation.
- Prescriptive Analysis:
 - Finally get the data without error for data analytics role.

Finally I get the clear data set from data analysed.
